

Ceramic Insert Foil Blades Provide Improved Wire Formation

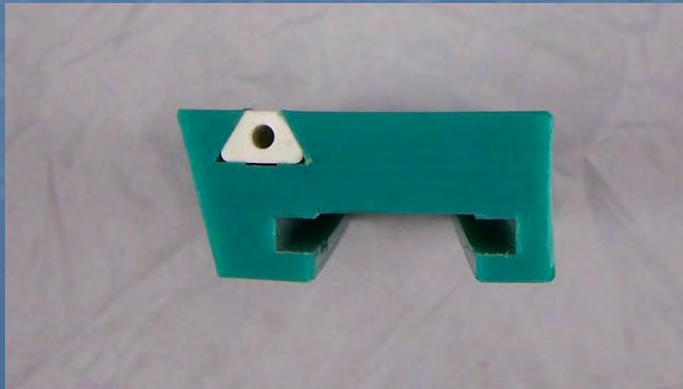

Designed to increase the life of ultra high molecular weight polyethylene blades where abrasion is a concern.

Available in a variety of blade angles and widths to match your application. Available for all types of T-bar and dovetail mountings.

The ceramic inserts are placed at areas for maximum effectiveness.

Extended life of blade angle gives improved drainage control in the forming section. Ceramic inserts are maintenance free.

Available with aluminum oxide ceramic insert choices up to 99.5% pure.
